

ArcGIS 10.0 Imagery

Joseph B. Bowles

Presentation Overview

- Imagery and raster data
- What is a mosaic dataset
- Use of mosaic datasets
- Build a mosaic dataset
- Migrate to mosaic datasets

- Q&A

Characteristics of Imagery and Raster Data

- **Many sources**
 - Aerial photographs
 - Satellite imagery from many sensors
 - DEM and scanned maps
 - Analytical data
- **High resolution and large volume**
- **Requirements:**
 - Store efficiently
 - Easy to search
 - Fast to process
 - Accessible

Evolution of Raster Data Models in ArcGIS

- **Raster dataset (8.0)**
 - A single image
- **Raster catalog (9.0)**
 - A collection of raster datasets
 - Managed/unmanaged
- **Image Server (9.2)**
- **Mosaic dataset (10.0)**
 - Enhanced raster catalog with mosaic view and on the fly processing capability
 - Managing and serving a collection of images

Raster Datasets

- **Formats**

- TIFF (bigTIFF), Mrsid, JP2000, NITF, CADRG, Geodatabase raster etc
- Compress: JPEG/LZW/LZ77/PackBits/CCITT

- **Pyramids**

- Reduced resolution copies of the source
- Improve display performance
- Support three resample methods
- Can be compressed

- **Statistics**

- Enhance visual display

- **Build Pyramids and Statistics tool**

- Support mosaic dataset

Nearest
neighbor

Bilinear
interpolation

Cubic
convolution

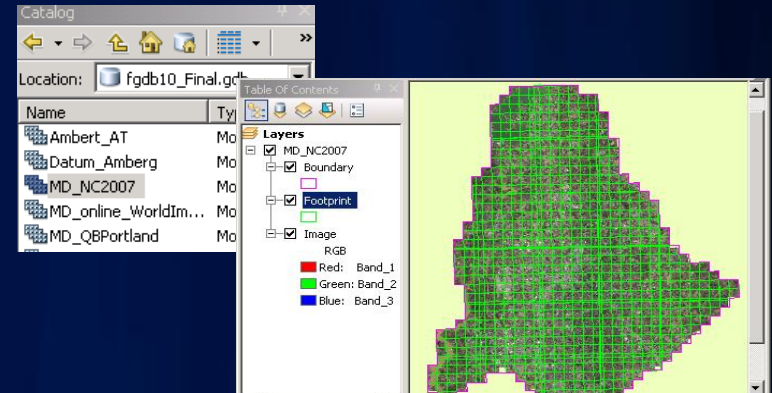

Mosaic Dataset

- A GDB data model for managing and serving image collections
- Supported in FGDB/PGDB/SDE
 - Do NOT store pixels but reference them
- Advantages
 - Reduce processing time and storage
 - Catalog large image collection fast
 - Seamless display at all scales
 - Multiple sensors and metadata
 - Streamline update and maintain quality

Mosaic Datasets – Storage Schema

- A composite layer in ArcMap
 - Footprint/boundary/seamline
 - Image

- Stored as a set of internal geodatabase tables

Name	Purpose
Catalog	A raster catalog that stores function rasters and the footprints
Boundary	A feature class that defines the mosaic dataset boundary
Seamline	A feature class that maintains the seamlines for advanced mosaicking operations
Raster Type	A table holding each raster type instance
Log	A table that logs operations that have been performed

Mosaic Datasets – Catalog Table

OID	Shape	Raster	Name	MinPS	MaxPS	LowPS	HighPS	Category	...
1	Polygon	<Raster>	P01.met	0	90	10	30	Primary	
2	Polygon	<Raster>	P02.met	0	90	10	30	Primary	
5	Polygon	<Raster>	filename1.tif	90	270	90	90	Overviews	

- **A special raster catalog**
 - Shape field stores the footprints
 - Raster field stores function raster datasets
- **Function raster datasets**
 - Store references to the image along with processing
 - Process on the fly during access
- **MinPS and MaxPS define the visibility ranges of the rasters**

Mosaic Dataset – Overviews

- **Fast and seamless display**
- **Overview vs. Pyramids**
 - **Overviews** for mosaic dataset
 - **Pyramids** for raster dataset
- **A set of resampled rasters**
 - **Multiple levels**
 - **Each level has multiple tiles**
 - **Each tile is a tiff file**

Mosaic Dataset – Mosaic Rules

- **Control which raster/pixels to display**
- **Mosaic method to sort the rasters**
 - Closest to center (default)
 - By attribute
 - Closest to nadir
 - North west
 - Seamline
- **Mosaic operator to resolve the overlaps**
 - First/Min/Max/Mean/Blend

Closest to the center

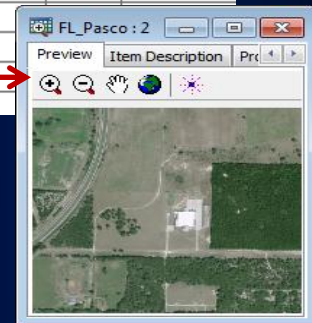

By attribute: cloud cover

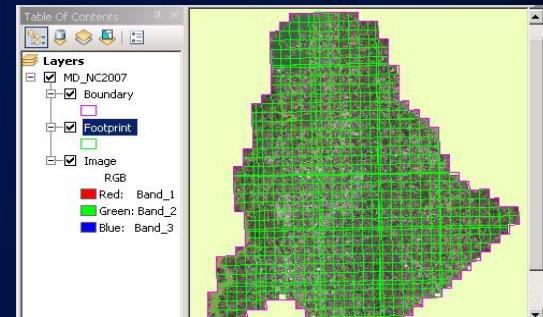

Use of Mosaic Dataset

- Use as a catalog
 - Selection/query
 - Add selected images to Map
 - View raster and metadata
 - Time aware

OBJ	Raster	Name	Min	Max	Low	HighPS	Category
1	<Raster>	op2008_59515_N	0	6	1	2	Primary
2	<Raster>	op2008_59516_N	0	6			
3	<Raster>	op2008_59517_N	0	6			
4	<Raster>	op2008_59518_N	0	6			
5	<Raster>	op2008_59519_N	0	6			

- Use as a raster dataset
 - Seamless display
 - Export a raster dataset
 - Use as an input to geoprocessing tool

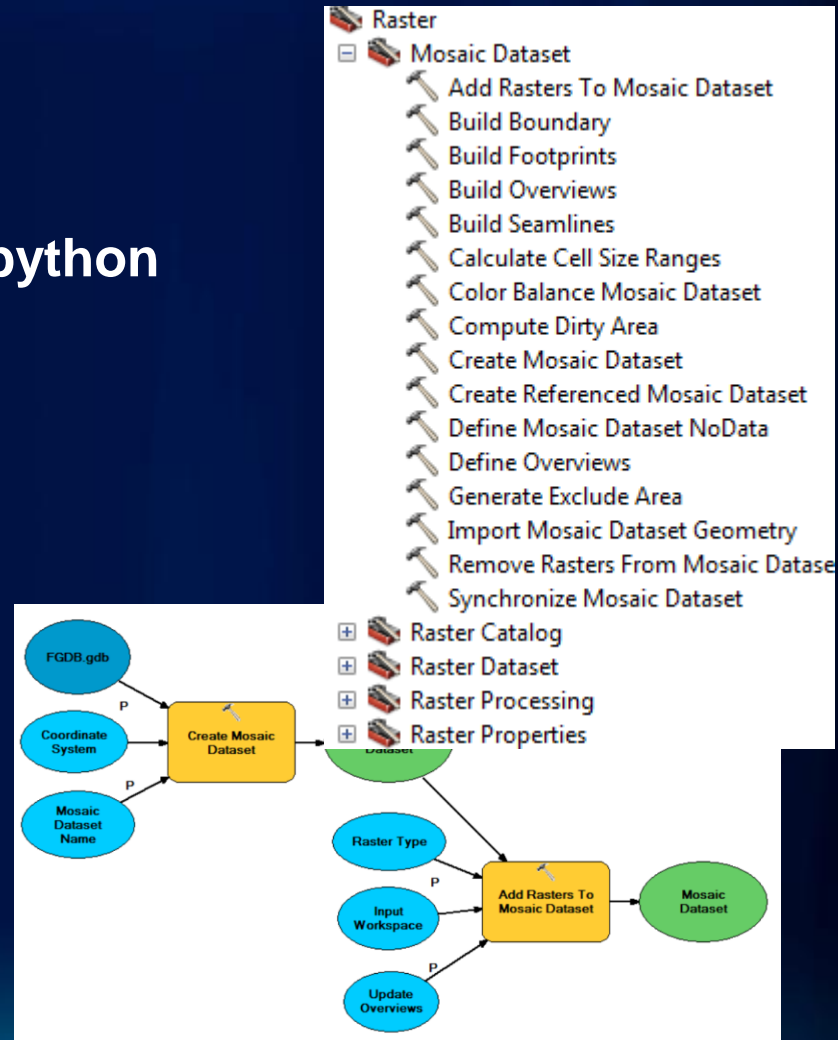

Use of Mosaic Dataset (Continue)

- **Serve as an image service**
 - **Similar functionality as local mosaic dataset**
 - **Access as a catalog**
 - **Select/download selected images**
 - **Time aware**
 - **Access seamless mosaic**
 - **REST**
 - **WCS/WMS**
- **Image Extension license**

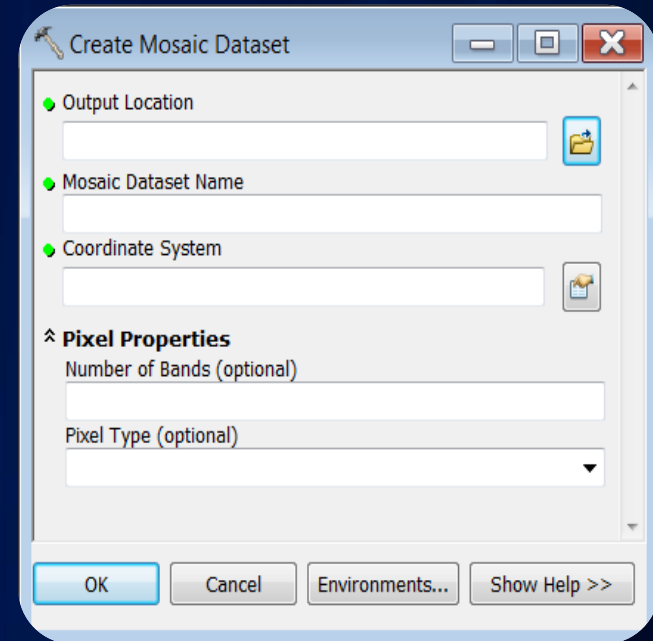

Build a Mosaic Dataset

- Mosaic dataset toolset
- Automate with model and python
- Typical workflow
 - Create a mosaic dataset
 - Add rasters
 - Calculate cell size range
 - Build boundary
 - Build overviews (optional)
 - Edit properties (optional)

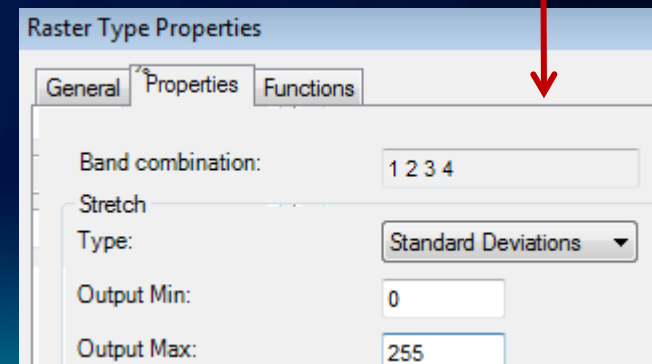

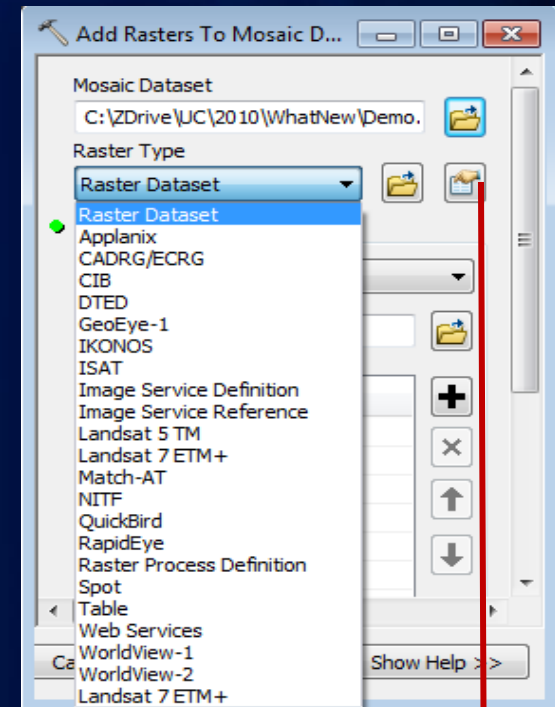

Build a Mosaic Dataset - Create

- Create table schema and define pixel properties
- Spatial reference (required)
 - Used in footprints and overviews
 - Can be different from input
 - Datum consideration
- Number of bands
 - Taken from the first added raster
- Pixel type
 - Taken from the first added raster

Build a Mosaic Dataset – Add Rasters

- **Specify a raster type**
 - Define the format to crawl
 - Metadata to read and fields to create
 - Processes to apply
- **Support many raster types**
 - Raster Dataset/NITF/CADRG/etc.
 - QB/IKONOS/Landsat/WVI/WVII/etc
 - Web Services
 - Table/Image Service Definition

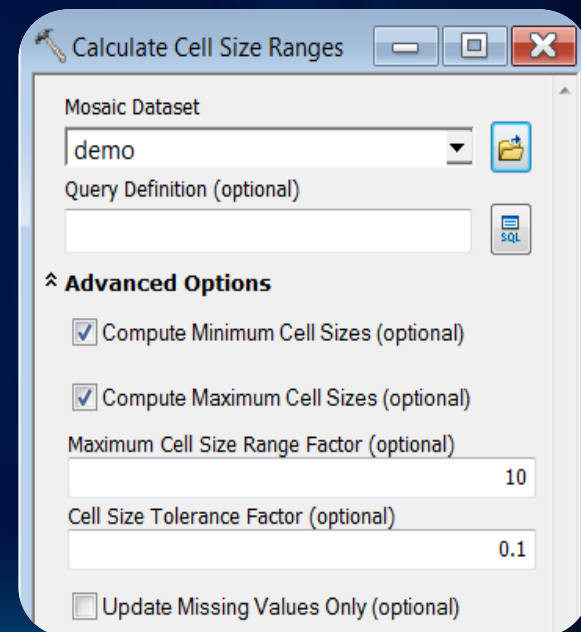

Build a Mosaic Dataset – Cell Size Ranges

OBJECTID *	Raster	Name	MinPS *	MaxPS *	LowPS *	HighPS *	Category	Tag
1	<Raster	Campus_08May2008	0	12.329262	0.616463	1.232926	1	Dataset
2	<Raster	Campus_14May2008	0	11.338233	0.566912	1.133823	1	Dataset

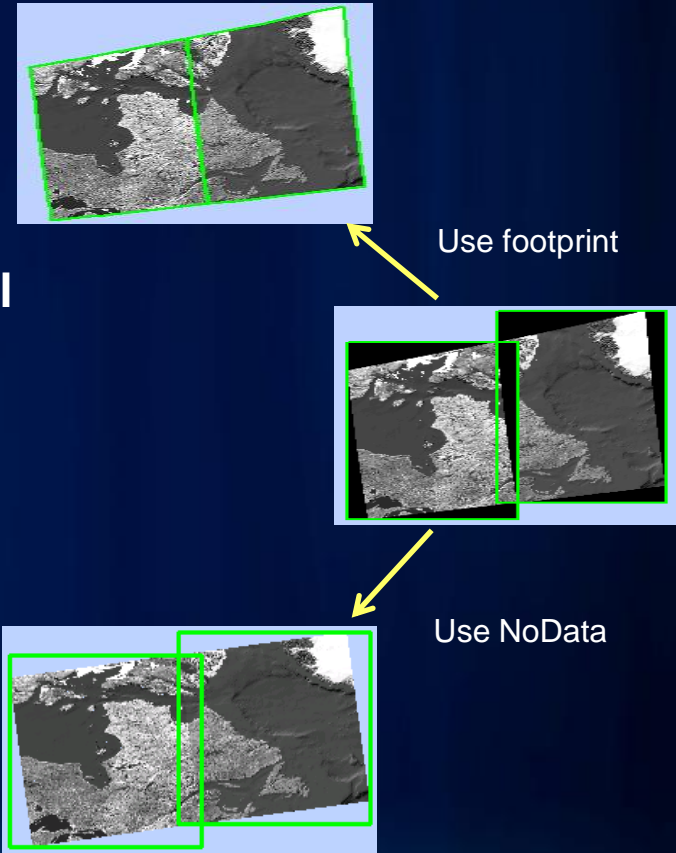

- MinPS and MaxPS define the visibility of the rasters
- Use Calculate Cell Size Ranges tool
- Based on source and overlaps
- Default cell size range factor is 10

30m	visible range 30-300	
5m	visible range 0-50	→ 5-30
1m	visible range 0-5	

Building a Mosaic Dataset – Background

- **Footprint**
 - Build Footprint tool
 - Edit using Editor
 - Import Mosaic Dataset Geometry tool
- **Define NoData**
 - Based on a value
 - Based on a range

Build a Mosaic Dataset - Boundary

- **Define the boundary of the mosaic dataset**
 - Pixels outside the boundary will be clipped
- **Build using Build Boundary tool**
 - Calculated based on footprints
- **Can be modified using Editor**
- **Import Mosaic Dataset Geometry tool**

Build a Mosaic Dataset – Overviews

OID	Shape	Raster	Name	MinPS	MaxPS	LowPS	HighPS	Category	...
1	Polygon	<Raster>	P01.met	0	90	10	30	Primary	
2	Polygon	<Raster>	P02.met	0	90	10	30	Primary	
3	Polygon	<Raster>	filename1.tif	90	900	90	90	Overviews	
4	Polygon	<Raster>	filename2.tif	90	900	90	90	Overviews	

- **Build Overviews tool**
 - **Generate overview images**
- **Define Overviews tool**
 - **Redefine the default parameters**
- **Optionally add an external raster as overview**

Default overview parameters:

TIFF format with JPEG

Size is 5120x5120

Factor of 3

Overview location

Build Mosaic Dataset – Advanced Processing

- **Color Correction**

- Based on a calculated color surface
- Based on an existing target raster
- Support excluded area

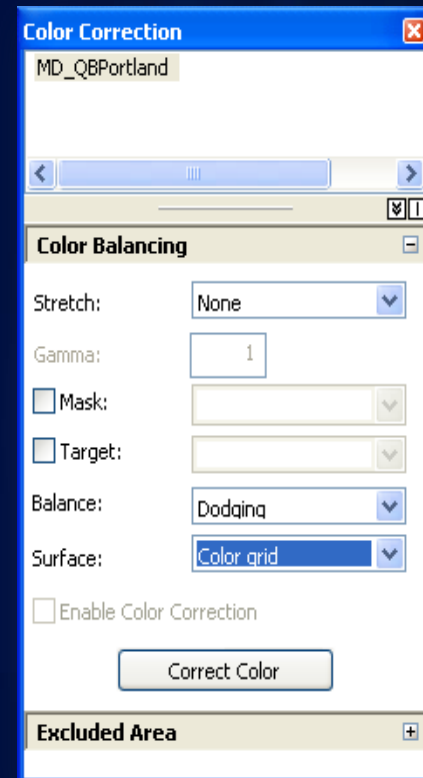

Before

After

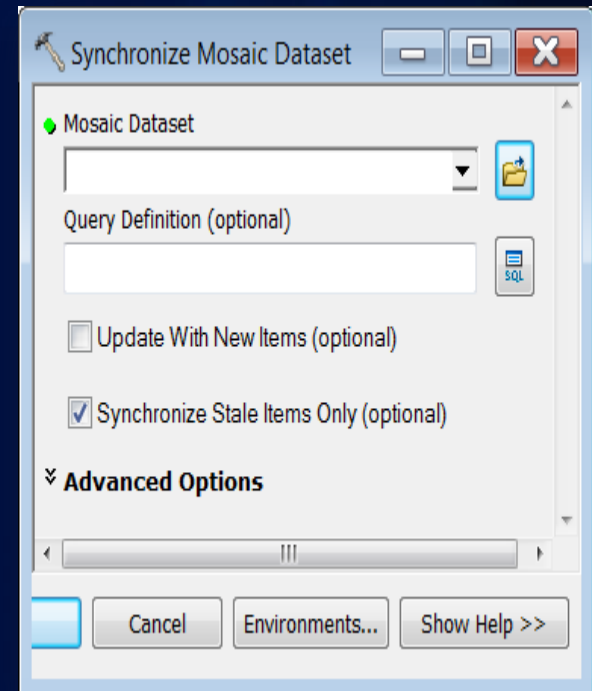

- **Seamlines**

- Used for seamline mosaicking
- Build Seamlines GP tool
- Edit and Import seamlines

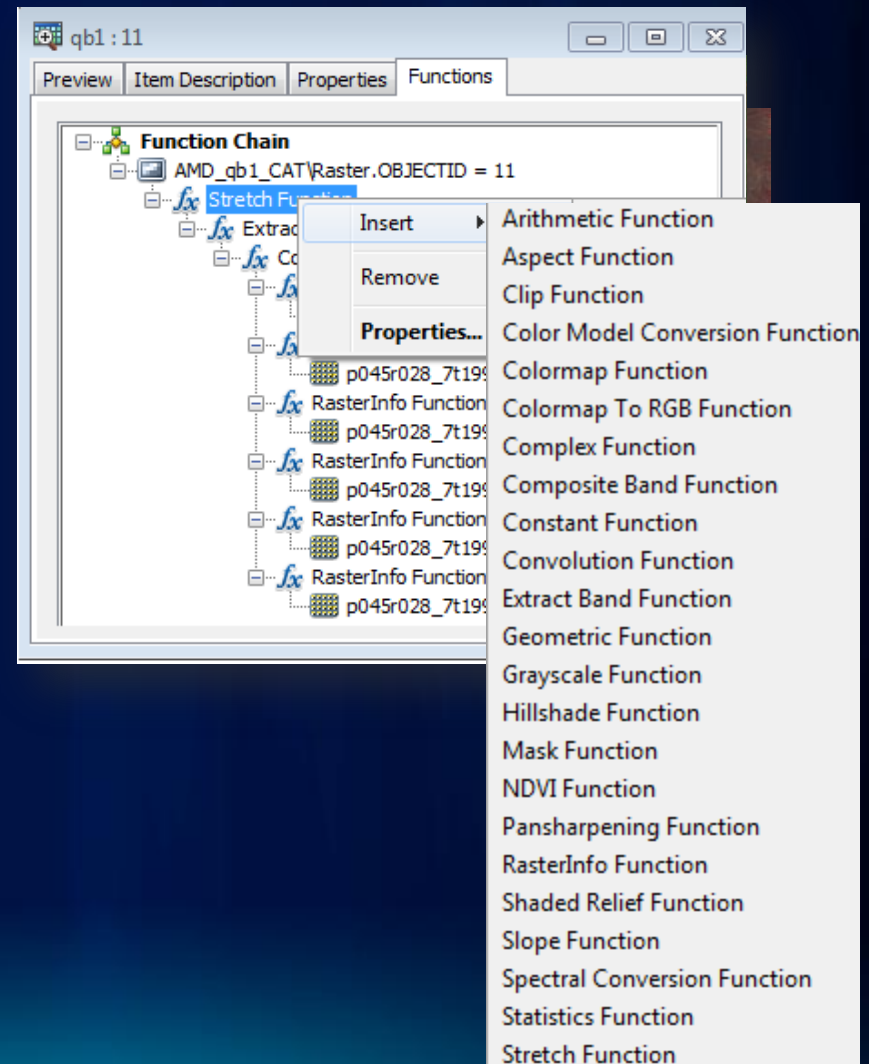

Mosaic Dataset – Update

- **Add new rasters from a folder**
 - **Synchronize Mosaic Dataset tool**
 - Identify new data in the folder
 - **Add Raster tool**
- **Source rasters are changed**
 - Changes in geometric/metadata/etc.
 - **Run Synchronize Mosaic Dataset tool**
- **Remove Rasters**
 - **Use Remove Rasters from Mosaic Dataset tool**

Mosaic Dataset – On-the-fly Processing

- **Process image on-the-fly**
 - Image enhancement
 - Orthorectification, Pan-sharpen
 - Shaded relief, hillshade, etc
- **Add at mosaic dataset level**
- **Add at raster level**
 - Apply to the raster

Reference Mosaic Dataset

- **References an external mosaic dataset or raster catalog**
 - Supported in GDB and file (.amd)
 - Catalog table is read-only

- **Created by specifying**
 - Definition query
 - Area of interest

Boundary = My County

Where Sensor = Landsat
and Cloud <10%

Add NDVI processing

- **Provides multiple views of the source mosaic dataset**
- **Prevents editing of the source mosaic dataset**

Mosaic Dataset - Derived

- Adding mosaic datasets to a mosaic dataset
 - Using Table raster type
 - Copy all records and the raster type to the master mosaic dataset
- Adding selected items of a mosaic dataset
 - Save as a mosaic layer
 - Add mosaic layer use Table type
 - Selected records will be added to mosaic dataset

Image Management Patterns

- **Create mosaic datasets with data of similar type**
 - Elevation
 - Ortho images of same date
 - QuickBird/IKONOS
 - Landsat 5 or 7
- **Create derived mosaic datasets if needed**
- **Create referenced mosaic datasets**

Moving a Mosaic Dataset

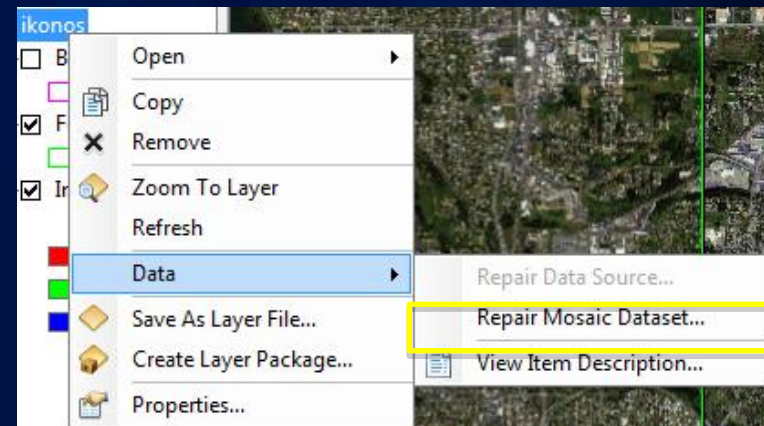

- **Move all**

- Copy the FGDB where the mosaic dataset resides
- Copy the source and overview images
- Use Repair dialog to repair the paths

- **Extract a portion**

- Create a new folder
- Create a target File geodatabase
- Use Distributed Geodatabase toolbar
- Copy/move the whole folder

Migrating to Mosaic Datasets

- **From Image Server Service Definition**
 - Create a mosaic dataset
 - Use Image Service Definition raster type
 - Add the ISDef file
- **Raster Process Definition raster type**

Image service Definitions	Mosaic dataset
.Amberg.ISDef	
ImageService.ISDef	Mosaic dataset
Footprint.dbf	Footprint feature class
Boundary.dbf	Boundary feature class
Seamline.dbf	Seamline feature class
.\RPDefs\rasteris.RPDefs	Function raster datasets

Migrating to Mosaic Datasets (Continue)

- **From a raster catalog**
 - Create a mosaic dataset
 - Use Table type to add
 - Raster datasets are re-added as function raster datasets

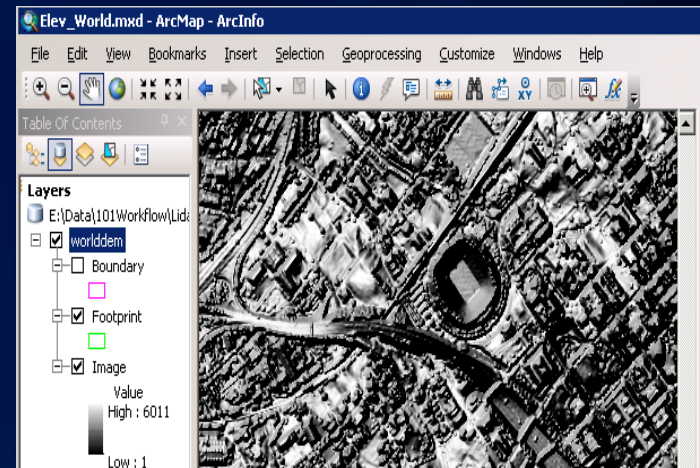

- Find the source data and re-create mosaic dataset

Summary

- **Mosaic dataset advantages**
- **Usage of mosaic datasets**
- **How to build a mosaic dataset**
- **Reference and derived mosaic datasets**
- **Update and deploy mosaic datasets**
- **Migrate to mosaic dataset**

What is New for Mosaic Dataset in 10.1

- **Support more raster types**
 - LAS, LASDataset, Terrain
 - Radarsat2, Kompsat, Formosat
- **Many New tools**
 - Analyze Mosaic Dataset
 - Edit Raster Function
 - Set Mosaic Dataset Properties
 - Alter Mosaic Dataset Schema
- **New raster functions**
 - Remap Function/Band Arithmetic Function/Attribute Table Function
- **Enhancements**
 - Automatic seamline generation
 - Calculate footprint by geometry
 - Create good looking mosaic dataset easily
